

WebControl Logging Appliance **HS-WEB7000L**

Significantly improve the performance of Websense® reporting and queries on tier 1 HP hardware at a fantastic price point

The Portcullis Systems HS-WEB7000L

provides a significant performance boost for environments where separation of gateway functionality and reporting is required. Built on high-performance HP hardware, the HS-WEB7000L combines Intel® Quad Core Xeon® performance with 4 x 146 GB, RAID 10 redundancy for optimal speed and reliability and improves performance on WebControl Gateway appliances.

Redundant off-box log storage and reporting is critical for companies that must preserve audit trails of web usage. A separate system for logging and reporting is particularly important for organizations that actively review Websense® logs to investigate suspected and attempted policy violations because report generation is very resource-intensive. In very busy environments, reporting and log writing can adversely affect the performance of Websense enforcement and ISA Server firewalls when all are run on the same system. By off-loading logging and reporting from a primary Websense server to a logging and reporting appliance, the enforcement Websense & ISA Server appliance can support more concurrent Internet users. A dedicated logging appliance also provides snappy response to log queries, even during times of peak Internet activity.

The Portcullis Systems WebControl Logging Appliance is a performance-optimized server system that is factory-configured and ready to run all required tools immediately on power-up. The integrated high-value software stack includes:

- Websense logging and reporting tools which include the Websense Log Server and the Websense Explorer for total web-based log and reporting access.
- Microsoft SQL Server 2005 Express delivers a scalable relational database that responds quickly to report requests, drill-downs and data mining. Microsoft SQL Server 2005 Express supports databases twice as large as MSDE databases which are based on Microsoft SQL 2000 technology and provides a significant increase in performance over MSDE-based environments.
- Winfrasoft Configuration Wizard for Websense seamlessly integrates the Websense tools with SQL Server for rapid deployment. The wizard sets all network addresses on both the logging and enforcement servers as well as the ISA firewall rules on the enforcement server to have them up and running in minutes.
- Fully integrated appliance delivers a well-tuned solution live out-of-the-box.
- Portcullis Systems takes the struggle out of deploying and running Websense. Our series of WebControl Appliances makes it easy to implement the complete Websense environment on a single platform – or as a two-box solution integrated with the WebControl Logging Appliance. A logging appliance can be added to support a single-box WebControl deployment at any time.
- By integrating Websense and SQL Server 2005 with a comprehensive configuration wizard and PSAM, Portcullis Systems provides everything needed in a logging and reporting system. The logging appliance arrives pre-configured with database parameters that assure optimum performance in the Websense environment and the configuration wizard sets all Websense, Windows and ISA Server parameters to support your network topology.

Portcullis Systems Appliance Management (PSAM) provides advanced technology to keep your investment operating at maximum efficiency

Portcullis Systems Appliance Management (PSAM) included on each of our appliances is vital to deployment and ongoing management. Key features of PSAM are Hardware and Software Alerting, Patch Management, Reporting, Virtual Engineer, Remote Support Access and Backup and Restore capabilities.

World-class 24 x 7 x 365 support with onsite support options worldwide

At Portcullis Systems, we believe support is critical to the long-term relationships we build with our customers. We understand that our products may be critical components within your infrastructure. Therefore, we provide around-the-clock call center support with guaranteed callback within one hour. Support requests can be made through our website, via email or by calling our support hotlines in North America or Europe. Our technical support team is staffed by well-trained, seasoned professionals with years of experience. We also provide a knowledge base and full product documentation that is accessible from our website. Our mission is to provide our customers with exceptional support and resolve issues thoroughly and as quickly as possible.

Portcullis Systems delivers outstanding appliance value

The HS-WEB7000L appliance brings together advanced technology, high performance and simplicity all integrated on a high-performance HP platform. Rich deployment wizards, security and the robust management tools of PSAM make this product easy to install and brings value within minutes of deployment. Delivered with our world-class support capabilities for hardware and software, you have the industry's strongest value in security appliances. Our solutions deploy quickly to provide years of improved performance and strong, flexible security at a truly low Total Ownership Cost.

Portcullis Systems WebControl Logging Appliance HS-WEB7000L

Software features

- Pre-configured Websense Web Security Suite® and Websense Enterprise® (6.3.2 with free upgrade to Websense 7 when available)
- Microsoft SQL Server 2005 Express
- Hardened Windows 2003 R2 with SP2
- Winfrasoft Configuration Wizard for Websense
- Portcullis Systems Appliance Management (PSAM)
- HP integrated Lights-Out (iLO) management

Appliance platform specifications

Form factor	Mini 1U Rackmount
Dimensions (WxHxD)	16.78 x 1.70 x 27.25in (42.62 x 4.32 x 69.22cm)
Weight	37 lb (16.82 kg)
Processor	Intel Quad Core Xeon 2.5 GHz
Memory	4 GB DDR2-667 ECC
Front bus speed/Cache size	1333 GHz/12 Mb
Hard drive	4 x 146 GB hot-plug 2.5 SAS RAID1 10,000rpm
Network interface	2 Gigabit Ethernet ports
Support Options	1 - 5 Year support packages up to 4-hour onsite
Remote Management	HP iLO 2, PSAM
